Exploring New Dental Tech!

As Dr. Norige continues his quest to help patients maintain and regain health, he and Deb wanted to test the latest diagnostic tools at a seminar this month.

The seminar focused on teaching dental pros how to accurately determine whether a patient has periodontal disease, or is in line to develop the disease. Periodontal disease develops when pathogenic (bad) bacteria is left undisturbed in the mouth for too long (and it doubles monthly, if unchecked!).

The Dark Phase Microscope is the latest technology, coming soon to our office, and it allows you to see for yourself if there are any bacteria swimming around in your mouth, and will help Doc determine the correct treatment for you.

Above: Deb sampling Doc's mouth for perio pathogens in step one of the latest diagnostic test for gum disease.

Left: Deb and Doc take a photo op with Dr. Tom Nabors, Jr., a speaker at the seminar.

We Have Plenty of Reasons to be Thankful This Year!

Our sincere thanks to you, for choosing us for your dental health, and special thanks to those who have referred friends and family to our care.

We are also thankful for good times with family and friends (demonstrated by a photo Doc took of his wife and grandkids exploring the PEZ museum this month).

Thank you all for referring to us this year!
